Riddhiman Dasgupta

Interests:

Systems & Network Security, Algorithmic Problem Solving, Automated Threat Analysis.

Skills:

Programming Languages	• Python • Java
Libraries & Tools	• PyTorch • Git

Select Projects:

Web-Based Cryptographic File Hasher

Developed a client-side security tool that generates cryptographic checksums (SHA-256) for local files to verify data integrity and detect tampering.

Uses Python's native hashlib library to generate standard hexadecimal SHA-256 digests.

Reads files in 64 KB increments rather than loading the entire file into RAM, allowing it to handle large files without high memory usage.

Verifies that the targeted path exists and corresponds to a valid file prior to computing the hash to prevent runtime errors.
